

testa	Question	A	B	C	D	E
1	A client creates a EB.USER.ROLES with ID = PM, and then he tries to create a BROWSER.PREFERENCES with the same ID = PM. They notice that the system reports an error as "Too Few Characters". He wants to find out how to resolve the issue.	This is the bug in the T24 system and Temenos core has fixed the issue. The client needs to take the relevant updates to resolve this	The client must only use EB.USER.ROLES of length = 3 in BROWSER.PREFERENCES. This is a valid restriction in T24	The BROWSER.PREFERENCES has a bug which Temenos needs to fix by decreasing the minimum size for the ID	The BROWSER.PREFERENCES has a bug which Temenos needs to fix by increasing the maximum size for the ID	
2	Which statement is true wrt F.DELETE	Needs only filename & key	Needs the records to be read	Cannot be used during COB	Needs the records to be locked	Does not use cache
3	Which of the following code snippet is correct for performing the form level validation that the ID entered should have max length of 16 characters	IF LEN(ID.NEW) GT 16 THEN ERR = "MAXIMUM ALLOWED LENGTH IS 16" RETURN END	IF LEN(ID.NEW) GT 16 THEN ETEXT = "MAXIMUM ALLOWED LENGTH IS 16" CALL ERR END	IF LEN(ID.NEW) GT 16 THEN E = "MAXIMUM ALLOWED LENGTH IS 16" CALL ERR END	IF LEN(ID.NEW) GT 16 THEN E = "MAXIMUM ALLOWED LENGTH IS 16" RETURN END	
4	Which one of the following does not happen in AUTH.RECORD.WRITE	Update F.JOURNAL	Redo Audit.Fields	Call AUTH.ROUTINE specified in the current version if any	STP Processing	update CONCAT files
5	Which one of the following does not happen in UNAUTH.RECORD.WRITE?	Constant Processing	Audit Fields Updated	Calls the AUTH.ROUTINE specified in the current version if any	STP Processing	
6	Which of the following IN2 routine needs to be called if a field should accept Amount	IN2SW	IN2CCY	IN2AMT	IN2NOAMT	IN2
7	Which API can be used to read a static record	F.READ	F.MATREAD	CACHE.READ	STATIC.READ	
8	Which is the correct RELEASE statement	RELEASE Filename,ID	RELEASE Filevariable ,ID	RELEASE Filename, Filevariable,ID	RELEASE Filename,ID, Filevariable	
9	What is &HOLD&?	It is a J4 File	It is a T24 application	It is a directory	None of the above	
10	The common variable that holds override message is _____	E	ETEXT	ERR	TEXT	
11	What would be the size of the cache memory when routine CACHE.READ is called to read files?	C\$SYSDIM	No restriction, system uses TAFC Cache	500	C\$CACHE.SIZE	
12	Which of the following indicates that the bulking of list records needs to be done in BATCH.BUILD.LIST	BATCH	.LOAD	PGM.FILE or LIST.PARAMETER	.FILTER	
13	Which is the common variable that must be used in an ID version routine to access the ID that has just been entered	O.DATA	COMI	R.NEW(0)	ID.NEW	
14	Which of the following insert files needs to be included to use the variable D.RANGE.AND.VALUE	I_COMMON	I_ENQUIRY.COMMON	I_EQUATE	I_Table	
15	Which is the correct execution of methods in a template	Process, Validate, Authorise	Validate, Records, Authorise	Record.Validate, Authorise	Record, Authorise, Validate	
16	Which of the following statement is incorrect regarding BUILD.ROUTINE in Enquiry application	This routine is used to manipulate the selection criteria of enquiry	This routine uses a common variable ENQ.DATA to access dynamic selection	This routine is executed before the final list of IDs selected to be displayed are decided	This routine can be used to add/remove selection from dynamic selection criteria	
17	What does APPLICATION variable contain during COB?	Contains null value	Batch Process Name	File that is getting updated	Currently executed job	
18	If a version has to be dynamically altered for a particular session, which variable can be modified?	PGM.VERSION	Cannot be done	R.VERSION.CONTROL	R.VERSION	U.VERSION
19	Which core routine invokes IN2 routines	IN2	EB.CALL.IN2	EB.IN2.CALL	Invoked directly	
20	How many times can a .SELECT routine invoke BATCH.BUILD.LIST	Maximum of 3 times	Once	Once per control list in a job	No limit	
21	Which T24 API will you use to add a field, where the values in the field can be configured by the bank	addOverridesField	addFieldWithEbLookup	addYesNoField	addField	
22	Which of the following parameters is required by the write statement	File variable, Key, Dynamic Array	File variable, Key, Dimension Array	Dynamic Array, Key	Dimension Array, Key	
23	The best way to count the number of Accounts held by a customer is to	Write a routine to read a specific record from CUSTOMER.ACCOUNT application and then apply DCOUNT function to count the no. of Accounts with SM as separator	Write a routine to read a specific record from CUSTOMER.ACCOUNT application & then apply DCOUNT function to count # of accounts with FM as separator	Write a routine to read a specific record from CUSTOMER.ACCOUNT application & then apply DCOUNT function to count # of accounts with VM as separator	Write a routine to read customer ID and loop through the account application to read the account held by the ID	
24	Which function should be used to find a substring in a string?	INSERT	FINDSTR	FIND	INDEX	LOCATE
25	T24 API OCOMO has been called by one of the COB routines. Which of the following values will not be written onto &COMO& by OCOMO?	TIME	JOB.NAME	Current key being processed	DATE	SESSION NUMBER
26	An XYZ bank would like to update a local application during authorization of a record in SECTOR. Which is the recommended way to achieve this?	Using OFS.POST.MESSAGE functionality	Use the OFS.GLOBUS.MANAGER functionality	Start a new transaction boundary by calling EB.TRANS, write the data on to the application and then end the transaction boundary by calling EB.TRANS again	Write the record in the local application(file) using WRITE/F.WRITE	
27	Which of the following API is used for generic log facility in T24?	Log.Record	Logger	T24.log	LOG.WRITE	
28	In which position is it generally advised to add he override field in a T24 application? Assume the application has override, local references & statement number fields and these are last 3 fields	Before the statement numbers field, after the local reference field	anywhere, as long as it is named override	After both statement & local ref fields	Before both statement & local ref fields	Before the local reference field, after the statement numbers field
29	When a field is defined as EXTERN using the T parameter in the template, the field gets certain characteristics. Which of these characteristics is not true for an EXTERN type of field?	The field becomes NOINPUT	Enrichment is not allowed for this field	Value of the field cannot be updated by the parent application	This field's value can be included in an enquiry	
30	Which T24 API can be used to read the Standard selection record for a given file	EB.GETS.STANDARD.SELECTION	Do a read cache on the Standard selection record	GET.STANDARD.SELECTION.DETS	getStandardSelection	
31	Which common variable can be used to access existing authorised record and not the current record a user has edited in the screen, both belonging to the same ID?	R.OLD	R.NEW.LAST	R.RECORD	R.NEW	
32	Which common variable can be used to access existing unauthorised record and not the current record a user has edited in the screen, both belonging to the same ID?	R.NEW.LAST	R.OLD	R.RECORD	R.NEW	
33	Predict the output of the following: PROGRAM HELLO CALL CDT(,"TODAY",+10C) STOP	Error	Current date+10 Calendar days	Current date + 10 working days	No output	
34	Which table in T24 holds information of all locks	F.RECORD.LOCK	OS.TOKEN	F.EB.RECORD.LOCK	OS.TOKEN.LOCK	
35	R.SPF.SYSTEM	Is a dynamic array that holds the currently logged in users SPF record	Is a dynamic array that holds the SYSTEM record in SPF	Is a dimensioned array that holds the SYSTEM record in SPF	Is a dimensioned array that holds the currently logged in users SPF record	
36	Which jBase setting tells whether Transaction Management is active or not	SYSTEM(47)	SYSTEM(103)	TRANSMGMT()	SYSTEM(1087)	TRANSACTION()
37	When does a file opened through OPF does not get into cache?	Always cached	If the call is done during COB	File is a concat file	There is no FILE.CONTROL record for the file	Cache is full
38	In a multithread routine to process customer data, the selection of ID is based on the SECTOR value of the CUSTOMER. The best way to implement	Code the SELECT statement, such that the ID's are fetched based on the condition	Select all the IDS & then before calling BATCHMBUILD.LIST filter the list with a logic written within the SELECT method	Write the record routine to check the value of the SECTOR field before applying the process	Write a filter routine with the condition	

39	What is the output of the following statements? PROGRAM A COMMON Y.NUMBER YNUMBER=0 FOR CTR =1 TO 5 CALL B PRINT YNUMBER NEXT CTR STOP; END SUBROUTINE B YNUMBER=YNUMBER+1 RETURN END	6	0	5	1	
40	Which character delimit the values in a dynamic array?	@FM,@VM,@SM	*,#!	@IM,@FM,@VM	None of the above	
41	What is the common variable that must be used in an Id version routine to access the Id that has just been entered?	R.NEV(0)	O.DATA	ID.NEW	COMI	
42	A user opens the CUSTOMER record modify the ADDRESS. But the moment the record is opened, an error message "Previous user work will be lost". What could be the reason for this?	The record cannot be amended	The record is reversed and hence it cannot be modified	The user tries to modify the record, that has been modified by another user	The user tries to modify the record, that has been modified earlier by the same user	
43	Which among the following is an incorrect variable defined in the insert file I_DAS<APPLICATION>	MY.OPTIONAL.FIELDS	MY.SUFFIX	MY.TABLE	MY.SORT	MY.JOINS
44	Which is not a functionality provided by OPF when opening a hashed file?	Caching	Returning File Variable	Identifying the physical file name	Creating the file if not present	
45	Name the routine that will return a date, based on a base date and number of days.	CDT	CDQ	CDAY	CFT	
46	A record ID looks like 100113;5. This means the record is in _____ file	History	Live	Record ID contain any special characters	Unauthorised	
47	Do we have to create PGM.FILE entry to a DAS routine. If so what is the type to be specified in PGM.FILE	Yes. M	Yes. S	Yes. B	No PGM.FILE entry is required	
48	What will be the content of the common variable PGM.VERSION when inputting transactions using the Version "FUNDS.TRANSFER.INPUT"	Value "YES"	","INPUT"	FUNDS.TRANSFER.INPUT	INPUT	
49	When compiling a subroutine that reads an ACCOUNT record and extracts the CURRENCY value, I get the following error Variable "AC.CURRENCY" is never assigned. What could be the reason for this error?	F.READU has been used instead of F.READ	OPF has not been performed on the ACCOUNT application before reading and extracting the current value	I have used the incorrect field name for CURRENCY in the ACCOUNT application	I have forgotten to include I_F.ACCOUNT in the code	
50	A technical consultant is in the process of writing a local routine in a bank that has implemented T24. He wishes to retrieve values from the CUSTOMER file. Records from t	F.READU	F.READ	CACHE.READ	DBR	
51	A technical consultant is in the process of writing a local routine in a bank that has implemented T24. He wishes to retrieve values from the current COMPANY file. In such a scenario, which T24 API should he use to extract data from COMPANY file?	CACHE.READ	F.READ	F.READU	Already available in common	
52	Following are the values of some jBASE environment variables export JBCDEV_BIN=\$HOME/localbin export JBCDEV_LIB=\$HOME/locallib. Following is a simple subroutine SUBROUTINE S	localbin	lib	bin	locallib	
53	Which core API can be used to check for null values in an expanded multi-value or sub-value field?	FT.NULLS.CHK	NULL.CHK	CHK.FT.NULL	DUP	NULL
54	Which of the following T24 API generates the next key in an application without a locking contention?	GENERATE.ALPHA.ID	GET.UNIQUE.ID	GET.NEXT.ID	UNIQUE.ID	
55	Which of the following commands can be used to release locks?	SHOW-ITEM-LOCKS	RELEASE	REMOVE	JRLA	
56	What is the command to be used to only compile a jBASE Basic program	COMPILE	EB.COMPILE	X CC	BASIC	
57	The 4 and 5 position value in the first parameter of BATCH.BUILD.LIST is not same. What could be the reason for this?	Bulking is active	These values are preconfigured	These two values can never be same as the 4 th parameter defines the last id updated in the job and 5 th one defines total number of keys to process	The no of records available in the specific application is more than the no of records that a list file can hold	
58	The System date on which T24 is running is Sept 14 2011. The T24 date is Sept 12 2011. What does the common variable "TODAY" store	Will not store anything to indicate that the System Date and Bank's date are not in Sync	TODAY stores the Branch's T24 date, so its Sept 12 2011	TODAY stores Today's date. So its Sept 14 2011	Will store an error code in EB.ERROR to indicate that the system Date and Bank's date are not in Sync	
59	What is the significance of .FILTER routine?	Should do nothing, all processing is determined in the record routine	The filter routine is used to filter the jobs selected for a BATCH record.	The filter routine is used to filter the jobs selected for COB processing.	The filter routine is used to filter the JOB.LIST files for COB processing.	The filter routine is used to filter the ids selected by the SELECT routine for cob processing.
60	LNGG	Holds the Language defined in the Company record	Holds the Language from the USER profile	Can be set at runtime	Holds the Language in the SPF record	
61	Which insert holds the common variables that can be used in version routines?	I_GTS.COMMON	I_COMMON.VARS	I_VERSION.COMMON	I_COMMON	
62	Straight Through Processing takes place in which core routine?	JOURNAL.UPDATE	AUTH.RECORD.WRITE	RECORD.READ	UNAUTH.RECORD.WRITE	
63	Which of the following declaration is correct regarding caching in DAS	DASS\$CACHE(500)	DASS\$CACHE(100)	the value defined in CSSYSDIM	DASS\$CACHE(0)	DASS\$CACHE(1)
64	The client wants an enquiry such that when the enquiry is run, the records are to be dynamically built in the file and then selected from them and displayed. Is this possible? If so what is the possible option	This can be achieved by writing a build routine to dynamically build the file and then select and display from the same file.	This can be achieved by writing a conversion routine in the enquiry	This could be achieved by writing a no file enquiry. Not possible through a simple enquiry.	This is possible only till R08	
65	Deal Slip Routines can be compared to what other T24 routine?	Build Routines in Enquiry	Validation Routines in a version	Conversion Routines in Enquiry	NOFILE Enquiry Routine	
66	When committing a record, UNAUTH.RECORD.WRITE is not called for which type of application?	W type applications	U type applications	T type applications	H type applications	L type applications
67	Which of the following functionality is not available from R7 template onwards?	CROSSVAL	VALIDATE	DELIVERY PREVIEW	CHECK FIELDS	
68	A client doing local development to post some Funds Transfer records using OFS into the T24 system. To create the OFS messages, he plans to make use of the core API OFS.BUILD.RECORD. He approaches you to find out what will happen if he mistakenly sends a multi-value for a single value field DEBIT.ACCOUNT.No to the OFS.BUILD.RECORD. As the consultant, which amongst this would correctly define the system behavior	There is no such validation in the system and the developer must ensure that the correct record array is sent to the OFS.BUILD.RECORD.	The OFS.BUILD.RECORD does have the required validation to exclude the multi-value from the OFS messages for a single value field.	The OFS.BUILD.RECORD will return an error message "EB.INVALID.FIELD" and will not form the OFS message when returning	The OFS.BUILD.RECORD will return an error message "EB.INVALID.FIELD" but will form the OFS message when returning.	
69	Which of the following values is incorrect with respect to the MESSAGE variable	DEFAULT	ERROR	AUT	PREVIEW	OVERRIDE
70	What does the common variable CSSYSDIM represent?	The size of the record in bytes - stored to the database	The size of the dimensioned common variables	The maximum number of fields that can be displayed in a version	The size of the of the dynamic array common variables	
71	The cache that will get reinitialised after each transaction is _____	Session Cache	Static Cache	Named Cache	Transaction Cache	
72	Which table can be used to provide run time lookup values?	EB.LOOKUP.FIELD	EB.DYN.CHECKFILE	EB.CHECKFILE	EB.LOOKUP	
73	Is it possible to read a record with a lock, even though the record is not available in a file?	Records cannot be locked both during read and write	Records can be locked only when writing	Records can be locked but not while reading	No. It is not possible.	Yes it is possible (to prevent other process to create a record with the same id)
74	Multithreaded routine can be executed as a part of _____	COB and as a service	COB	Service	None of the above	
75	The name of the routine to invoke a DAS routine is _____	DAS.<APPLICATION.NAME>	DAS.AC.DEBIT.CARD	DAS	DAS.RTN	

76	Assume the following content is stored in a dynamic array called SUBJECTS MATH VM ENGLISH VM GERMAN SM FRENCH VM PHYSICS SM CHEMISTRY VM HISTORY What does CRT SUBJECTS<1,4> return	FRENCH	PHYSICS SM CHEMISTRY	PHYSICS	PHYSICS SM CHEMISTRY VM HISTORY	
77	How do we select a sample of 100 CUSTOMER records with LANGUAGE =1' using EB.READLIST?	Provide selection criteria in 1st parameter and SAMPLE count in 2nd parameter	Provide selection criteria in 1st parameter and SAMPLE count in 3rd parameter	Provide selection criteria and SAMPLE count in 1st parameter	EB.READLIST cannot be used with both selection criteria and SAMPLE count	
78	Which of the following variable is used by the core API- RECORD.READ to decide the record to fetch?	V\$FUNCTION	OPERATOR	R.USER	MESSAGE	
79	Which variable gives the values of currently signed on Internet user?	OPERATOR	C\$EXTERNAL.ID	EB.EXTERNAL\$USER.ID	CURRENT.SMS.USER	
80	Which of the following needs to be passed as an argument to OPF so that it creates the hashed file if the file that it is trying to open does not exist?	FILE.CREATE	CHECK.CREATION	No such functionality available	NO.FATAL	
81	PROGRAM MY.TEST VAR1='1'.@FM:'2'.@VM:'3'.@SM:'4'.@FM:'5'.@FM:'6' LOOP REMOVE VAL FROM VAR1 SETTING VAL.MORE CRT VAL REPEAT END Predict the output of the program.	1 5 6	1 2	1 2 3 4 5 6	1 2j34 5 6	
82	When does the cache pertaining to OPF (which is otherwise referred to as static cache) cleared during online operations?	When transaction is committed	Never cleared	Session Terminates	When the size exceeds 500	
83	Which of the following is used for updating the audit fields of a record?	CURR.USER & <u>TERMINAL</u> NO	OPERATOR & TNO	R.USER & TERMINAL.NO	OPERATOR & <u>TERMINAL.NO</u>	
84	Which of the following statements can be used in a program to locate a number(str) in ascending order in a field marked delimited dynamic array (ARRAY) ?	LOCATE str in ARRAY<1> BY AR	LOCATE str in ARRAY<1, 1,1> BY "AR"	LOCATE str in ARRAY<1> BY "AR"	LOCATE str in ARRAY<1,1> BY "AR"	
85	How does a deal slip routine, access data of the field its attached to?	Using O.DATA	Using COMI	Using the parameter that the deal slip routine is written with	Using R.NEW	
86	Which one of the following statement is incorrect?	All version routines must have an entry in EB.API	Version routines are the only way that a client can customise the way an application works in T24	Version routines are not invoked if the number of authorisers is set to 0	Error messages are raised in validation routines	
87	What are the values printed when executing the following. PROGRAM TEST VAR1 = 5 CLEAR CRT VAR1 CLEARCOMMON CRT VAR1 STOP	"5 5"	"5 NULL"	"5 0"	"0 0"	
88	Which statement is correct about the index function?	Index function returns position of a character or characters in a string as per the occurrence requested	Index function returns the position of a character or characters in a string for all its occurrence	Index function returns the position of only one character in a string	Index function will return the number of times the character is found in the string	Index function returns only the first position of a character or characters in a string
89	Which variable can be used for transaction cache in a record routine (in relation to a multi threaded COB routine)?	CACHE.LIST	CACHE.ON	CACHE.OFF	USE.CACHE	
90	What is the code to count the no.of.address entered by the user while creating a new customer?	DCOUNT(R. CUSTOMER<EB.CUS. ADDRESS.@VM>)	DCOUNT(R.NEW(EB. CUS.ADDRESS.@FM))	DCOUNT(R.NEW(EB.CUS. ADDRESS.@VM))	DCOUNT(R. CUSTOMER<EB.CUS. ADDRESS.@FM>)	
91	An application programmer would like to read the OFS source record and load in a common variable. Which common variable can be loaded?	OFS.SOURCE.REC	OFS.SOURCE	Already available in common	OFS\$SOURCE	
92	What does the definition "XX-" represent in LOCAL.REF.TABLE?	Multi value	Multi value association	Sub value	Sub value association	
93	What happens when a record is read using F.READ and later read using F.READU (within the same transaction)?	Throws error	Read from disk and cleared from cache	Record read/locked from disk and put into cache	Record read from cache	
94	When reading a record from an application such as SC.PARAMETER which T24 subroutine should be used?	F.MATREAD	CACHE.READ	EB.READ.PARAMETER	F.READ	READ
95	You have a variable called MARKS which is supposed to contain a single numeric value. What is the ideal value to be used to initialise this variable?	(NULL)	0	NULL	None of the above	
96	When does the .SELECT routine of a COB job get triggered?	Parameterized at the BATCH record level	Once per control list in a job	Once per records in the .LIST	Once per job	
97	Predict the output FOR VARB = 2 TO 10 STEP -1 CRT VARB NEXT VARB	No output as the loop condition evaluates to false the first time itself	The loop will execute infinitely	10	2	
98	Which core api can be used to check duplicates in field values?	EB.DUPLICATE	DUP	DUPLICATE	CHECK.DUPLICATE	OFS.DUPLICATE.CHECK
99	In the R10 release of template programming, where is THE.TEMPLATE called?	It is called from the TEMPLATE subroutine	It is called from the VALIDATE. APPLICATION subroutine	It is called from the EB. EXECUTE.APPLICATION subroutine	The application flow is built into the TEMPLATE subroutine again just like in older releases	
100	For which of the following reasons WRITE is advised against F.WRITE?	Never advised	During COB	Immediate flush to the disk	Writing to sequential files	
101	When does static cache (OPF cache) get cleared during COB for an agent?	The COB is finished	The process is finished	Job is finished	Never gets cleared during COB	
102	In which common variable does OPF return errors if any?	OPF.TEXT	ETEXT	T.ERROR	E	
103	What is the size of the array declaration of the common variable, FWT?	300	Default value 500	CACHE SIZE as defined in SPF	FWT is not a dimensioned array that requires explicit declaration	
104	How is data returned from the NOFILE routine to the ENQUIRY?	Using the common variable R.RECORD	Using D.FIELDS, D. RANGE.AND.VALUE, D. LOGICAL.OPERANDS	Using the parameter that the NOFILE routine is written with	Using a common variable called ENQ. DATA	
105	While amending a record in the CUSTOMER application, the Sector should not be changed if the existing sector is 1001. How to achieve this?	Write a routine to Compare the value of sector entered by user with the value in R. OLD. If the value is 1001 then raise an error. Attach this routine to a Version	Write a routine to Compare the value of sector field in R.NEW. If the value is 1001 then raise an error. Attach this routine to a Version	Write a routine to Compare the value of sector entered by user with the value in R.OLD. If the value is 1001 then raise an error. Attach this routine to VERSION.CONTROL application	Write a routine to Compare the value of sector field in R.NEW. If the value is 1001 then raise an error. Attach this routine to VERSION.CONTROL application	
106	What common variable is set with the next task to be executed during the bulk processing in T24	OFS\$NEXT.TASK	OFS\$ACTIVE.TAB	OFS\$NEW.COMMAND	OFS\$NEWRECORD	
107	What will be th output of the following code segment? YVAR = 'HELLO WORLD' PRINT FIELD(YVAR,L,3)	HE	LO WORLD	LO WORL	O WOR	
108	What is the code to count the no. of address entered by the user while creating a new customer	DCOUNT(R. CUSTOMER<EB.CUS. ADDRESS.@VM>)	DCOUNT(R.NEW(EB. CUS.ADDRESS.@FM))	DCOUNT(R.NEW(EB.CUS. ADDRESS.@VM))	DCOUNT(R. CUSTOMER<EB.CUS. ADDRESS.@FM>)	
109	Which of the following variable is used by the core API- RECORD.READ to decide the records to fetch	V\$FUNCTION	OPERATOR	R.USER	MESSAGE	
110	Which of the following arguments needs to be passed as an argument to OPF so that it creates the hashedfile if the file that is trying to open does not exist	FILE.CREATE	CHECK.CREATION	No such functionality is available	NO.FATAL	
111	Cache created by the program is	Static Cache	Named Cache	Transaction Cahce	Session cache	
112	Which common variable contains the list of active users in T24	OPERATOR.LIST	NO such variable	USER.LIST	TOKEN.LIST	ACTIVE.USERS

Serial No.	Question	A	B	C	D	E
1	Is it possible to map fields in multiple enquiries defined in the same tabbed screen. If so, what are the rules?	No. It is not possible to map. However this can be done in versions.	Yes. Mapping is always done with respect to the first enquiry.	Yes. Mapping can be done between any enquiries.	Yes. But the values mentioned in the fields SELECT.FROM and <u>SELECT.TO</u> must be present in FIELD.NAME of the respective enquiries	
2	Choose the one CORRECT option with respect to enquiries in T24	A fast path enquiry allows data to be edited in the enquiry output	Enquiries cannot be used in OFS messages	An enquiry created to be executed online cannot be executed during COB	Enquiries cannot be printed during COB	
3	Bank ABC want to display customized error pages when a problem occurs with browser or ARC-IB. In particular, if the user tries to access a page that is currently unavailable due to maintenance work what would the administrator of the system have to do in order to display a customized error message	Create a new error in T24 EB.ERROR file. 2. Create a customized JSP page with the maintenance message. 2. Map the new error code with the new JSP page in the 'web.xml' file. 3. Restart the web server.	1. Create a customized HTML page with the maintenance message. 2. Add a reference to the new page in the 'web.xml' file as a 404 error code. 3. Restart the web server	1. Create a new error in the T24 EB.ERROR file. 2. Configure the TC server to map the new error code to the maintenance error code. 3. Configure the web server to display the error then the new code is returned from T24. 4. Restart the web server	1. Create a customized HTML page with the maintenance message. 2. Add reference to the new page in 'browserConnection.xml' file in 404 error code. 3. restart the web server.	
4	A super user at a bank, executes the enquiry REPORTLIST to find out the details of the reports generated. He gets the list on successful execution of the enquiry and is able to drill down to &HOLD& record and view the record as well. Once done he uses SPLUNK to scan the T24.log file created. He complains that the SPLUNK shows him the complete &HOLD& view of the record itself in the logs. As a consultant at the bank what will be your suggestion	The SPLUNK logs can update the complete details based on the configuration done in it	There is nothing wrong in this behaviour as the user is defined as super user	The user's SMS profile has been defined with COMPANYRESTRICT = ALL & APPLICATION = ALL.PG. To avoid this, the user profile must be changed	This is a bug in the splunk tool and needs to be fixed by splunk	None of the above
5	Menus are attached to the users using the USER application. Which one statement is false with respect to users and menus in T24	When a menu is attached to a user and he logs into T24 using the 'classic' mode, he can access the command line as well as the menu just like when using the Browser as front end	Menus can be attached to users using the INIT. APPLICATION field in the USER application	Multiple users in T24 can have the same menu attached to them	A menu can contain links to any application in T24	
6	Why would a bank want to create a Composite Screen with the NOFRAMES attribute?	To provide additional security and protect against spoofing and phishing attacks.	To allow 'frame' content to automatically expand to show the full set of data without being constrained by the frame sizes defined by the Composite Screen.	To prevent the user from manually resizing the 'frame' content.	All of the above.	
7	The format of a deal slip is defined in the application DEAL.SLIP.FORMAT. But what application need to be set up in order to print them? Choose the most appropriate answer	DEAL.SLIP.FORM. TYPE and REPORT. CONTROL	DE.FORMAT.PRINT	PRINTER.ID	PRINTER.ID and REPORT.CONTROL	
8	You have an ENQUIRY record and DEAL.SLIP.FORMAT record in the same name, called DISPLAY1. You have attached the name DISPLAY1 in the field Operation, when you commit a transaction using this version, which one will get triggered	The ENQUIRY names DISPLAY1 will be referred and deal slip will be generated in this format	Two deal slips will get triggered one through enquiry and other through the DEAL.SLIP.FORMAT	The DEAL.SLIP.FORMAT named DISPLAY1 will be referred and deal slip will be generated in this format.	It is not possible to have such setup	
9	What type of applications can generate deal slips in T24?	Only static tables like Customer etc	All applications in T24	Only applications that use the delivery subsystem to generate advices	Only contract based applications like LD.LOANS. AND.DEPOSITS etc	
10	For what function can deal slips not be triggered?	A - Authorise	I - Input	D - Delete	M - Method	
11	A bank is using the T24 software development kit (TSDK) to validate a contract's field date at the web server using a java routine by setting the WEB.VALIDATE attribute on VERSION. Which of the following statements are correct about the java validation routine?	Errors, Messages and Enrichments can be raised by the validation routine	Errors, Overrides and Messages can be raised by the validation routine	Errors and poverrides can be raised by the validation routine	Errors and Messages can be raised by the validation routine	
12	A user specifies the same selection criteria frequently on a particular enquiry. They decide to save the criteria as a favourite. Other users have a similar favourite so the bank decides to make the favourite accessible to all users. How is this achieved?	The enquiry favourite record ID needs to be changed to remove the USER's ID from the key	The enquiry favourite record must be updated to remove the OWNER field	The enquiry favourite record ID needs to be changed to include the "SYSTEM" in the key.	This cannot be achieved and all users have to save their own favourite.	
13	How do we capture zone time in a local reference field	Must be done locally	Define 'TIME' as its CHAR. TYPE	Define 'ZONETIME' as its CHAR. TYPE	Define 'RELTIME' as its CHAR.TYPE	
14	A developer doing local development designs an enquiry as below. FILE.NAME FUNDS.TRANSFER FIELD.NAME, DEBIT.VALUE,DATE OPERATION. 900. LENGTH.MASK--- 1L When he executes the enquiry, he notices that the system instead of giving a response gives a message as 'Request has timed out'. As a product consultant what will be your recommendation to resolve the problem	The file FUNDS. TRANSFER is a huge file with high volume of transaction. So the request is bound to get timed before completing the processing. So he needs to change this to NOFILE enquiry	The length mask of the field is setup correctly. This causing an error during the display and hence timing out	The timeout settings should be changed as the execution time is not sufficient with the current setup of timeout minutes/seconds	The operation field for a file enquiry cannot hold a numeric value and is a design error in the enquiry and needs to be changed.	This is a bug in the product and temenos core has fixed this in enquiry framework to not crash with Temenos during such execution. The client must hence take the relevant updates to the resolve the problem
15	A bank has spent a large amount of time designing their own default browser skin to conform to their bank coloring scheme including adding their own logos, changing button images and defining different colours for their enquiry text. However when they run browser they find out their new button images are not displayed. What is the most likely cause of this?	Both 1 & 2 are possible	The web server has not been restarted since the new images were installed	The new skin name has not been specified in browserParameters.xml	The web browser's (i.e. internet explorer or Firefox) cache has not been cleared	
16	What will happen when you add the same routine in INPUT. ROUTINE field of version and its associated version	System will not allow such setup	The routine will be called twice during the commit of the transaction of the version	System will prompt the question when the routine is triggered second time and based on the user input. system will progress	The routine will be called only once even though its defined twice	
17	T24 desktop supports the export of enquiry data to Crystal Reports for producing reports to management. Crystal Reports is not directly supported in Browser but enquiry data can be exported from T24 in a number of different formats. Which process is not supported?	Export the data in XML format from a Browser enquiry selection screen and transform it using a custom style sheet.	Export the data in XML format from a Browser enquiry selection screen and import it in to an application such as Crystal Reports or Business Objects	Configure the TC server to export the data in OFSML format and import it in to an application such as Crystal Reports or Business Objects	Define the report contents using the ENQUIRY, ENQUIRY.REPORT and REPORT.CONTROL applications. The report can then be run and exported as part of the COB.	
18	Assume AUTO.COMP.CHANGE field is not setup in version. A forex contract (FX0033500001) is inputted in BR1 branch company. What will happen when trying to input FX0033500001 from its BNK lead company?	Error ' cannot access record in another company'	Error 'input of other company record not valid'	FX0033500001 record will be opened up for input successfully	Error 'record missing'	
19	Assume AUTO.COMP.CHANGE field is not setup in VERSION. A forex contract (FX0033500001) is inputted in BR1 branch company. How can this contract be viewed from another CO3 lead company?	By inputting FX0033500001	Sorry, other companies records cannot be viewed.	By inputting FX0033500001 BR1	By inputting FX0033500001 CO3	
20	What are the pre requisites to secure document download to work? A) Drilldown configuration in the enquiry B) Channel creation in browser C) Updating listener definitio in TCServer. D) New StreamProvider java class	A,B,C	A,B,C,D	A & B	A	
21	Which of these stmt is true about a composite screen?	A composite screen is displayed using HTML frames or tables to divide different T24 content, depending on the 'noFrames' parameter on the web server or by adding a 'NO.FRAMES' attribute on the EB.COMPOSITE. SCREEN record	A composite screen is displayed using HTML frames or tables to divide different T24 content depending on the 'noFrames' parameters on the web server.	A composite screen is displayed using HTML tables to divide different T24 content	A composite screen is displayed using HTML frames to divide different T24 content	
22	What is the order of execution of selection criteria defined for an enquiry	Both selection criteria cannot be defined for a single enquiry so the order is immaterial	First the dynamic selection and then the fixed selection	Both the fixed and the dynamic selections are executed simultaneously	Fixed selection and then dynamic selection	
23	The option 'CAPTION' available for the field SECTION in the ENQUIRY application is used to	Display the data on the first line of header of the enquiry	Display the data on the top right corner of every page of the enquiry output	Display the data on the footer portion of each page of enquiry output	Display the data on the title bar of the window	

24	When defining a VERSION, a field can be defined as a HOT.VALIDATE or HOT.FIELD. What the difference between these attributes?	HOT.FIELD validation can be performed by a routine written in BASIC or java whereas HOT.VALIDATE validation can only be performed by BASIC routine	A HOT.FIELD validates only the current field whereas a HOT.VALIDATE validates the whole contract. Field defaulting is not performed	Both types of validation validate the whole contract but a HOT.FIELD only shows the errors for the current field. Field defaulting is applied during both validation types	A HOT.FIELD validated only the current field whereas a HOT.VALIDATE validates the whole contract. Field defaulting is applied during both validation types
25	What cannot be attached to a sub menu?	Tabbed screen	a main menu	a QUERY	composite screen
26	What happens when a file enquiry on high volume files like STMT.ENTRY is created as below and executed. FILE.NAME STMT.ENTRY SELECTION.FLDS. VALUE.DATE FILED.NO VALUE.DATE. OPERATION..900 LENGTH.MASK...1L	If the length mask of the field is not corrected, then the enquiry will timeout in browser	Both the above statements 1&2 can cause a timeout during execution on OFS also	The enquiry will run correctly and will not cause any timeout in browser	A date field in file enquiry cannot hold the operation value as numeric and enquiry will time out in Browser
27	A developer doing customization of browser versions finds that enrichment for one of the fields is truncated while using a newly created version. What is the possible cause. Assume taht enrichment appears properly for this field while using application	This is not possible. Enrichment will appear for the version if it appears for the application	The field is set as ENRICHMENT.ONLY in the version	The field ENRICHM.CHAR should be set for appropriate length of enrichment as this takes precedence	By default, the enrichment leght is 10 while using version
28	Browser and ARC-IB are capable of displaying enquiry data as graphs and charts. What technology is used to display the graph and charts?	Scalable Vector Graphics objects or images embeded on a HTML page	HTML	Scalable Vector Graphics	An image embeded on a HTML page
29	Which of the below statement is correct with respect to local reference fields?	Local reference fields can be created for any valid application in T24 using LOCAL.REF.TABLE and LOCAL.TABLE	Local reference fields are allowed for applications which have F(Z) = XX<LOCAL.REF in their field definitions	Local reference fields are allowed for applications which have F(Z) = XX<LOCAL.REF in the field definitions	Local reference fields are allowed only for H type templates
30	Which popup control works in browser?	RECURRANCE	calculator	rate control	calendar
31	What is true when creating a record in AUTO.ID START	Unique id can be set for full ID length	If the ID.LENGTH is input then the BASE.TABLE field is mandatory	If we want to have unique reference in the ID the minimum length of the ID should at least be of 12 chares	Uniqu id can be set for any T24 appln
32	The field FILED.NO in the VERSION application holds the value "TRAINING". The ID of the version record is CUSTOMER.INPUT. Is TRAINING an erroneous definition? Assume CUSTOMER application does not have any Local Ref fields				
33	In a multi-book installation of T24, there are 3 lead companies GB0010001, USD0010001, DE0010001. The lead company GB0010001 has 3 branches. You are designing an enquiry that when executed, will display the records of the lead company as well as its branches (assume you are logged into GB0010001). What setting will you make in your enquiry record?	When creating the enquiry, in the COMPANY.SELECT field, a NULL value must be input	When creating the enquiry, in the COMPANY.SELECT field, a GB0010001 value must be input. The enquiry automatically displays, all branch records as well	When creating the enquiry, in the COMPANY.SELECT field, must be multi valued and GB0010001 + all other branch id's must be defined	When creating the enquiry, in the COMPANY.SELECT field, a ALL value must be input. The enquiry automatically displays all branch records as well
34	There are various uses of the OPERATION field in the ENQUIRY application. Choose the option from the list that is FALSE.	Routines can be attached to change the extracted field before display in the OPERATION field	IF statements can be used in an enquiry and must be a part of the OPERATION field	Break Changes are defined in the OPERATION field	OPERATION field holds the T24 field name as specified in the STANDARD.SELECTION
35	A version called CUSTOMER.INPUT exists. When using this version to input and authorise Customer records, a user Notices that the SECTOR field becomes non-inputtable only when he opens an existing authorised record to edit. What settings in the version has enabled this behaviour?	The SECTOR field has been defined as a NOCHANGE.FIELD	The SECTOR field has been defined as a REKEY.FIELD.NO	The SECTOR field has been defined as a MANDATORY.FIELD	The SECTOR field has been defines as a NOINPUT.FIELD
36	When the field USE.DICTIONARY in SPF application is set, The correct syntax for the option DEFER in the OPTIONS field in DE.FORM.TYPE is	the layering concept is enabled in the system.	T24 will create DICT file when it is set to YES during CREATE.FILE	Language guidance can be enabled	allows indexes in DICT level.
37	How can you specify that you wish to reserve 4 lines for the header and 20 lines for the body of your report using the ENQUIRY application?	DEFER hh mm	DEFER nnD	DEFER nn:D/W/C	DEFER
38	Multiple versions of the CUSTOMER application have been created. They are CUSTOMER.INPUT and CUSTOMER.AUDIT. When the user opens the CUSTOMER.INPUT version, the requirement is, the user should be given an option to access the CUSTOMER.AUDIT version to see the audit fields. How can this be achieved?	Specify CUSTOMER.AUDIT in the field NEXT.VERSION in the version CUSTOMER.INPUT	Specify CUSTOMER.AUDIT in the field ASSOC.VERSION in the version CUSTOMER.INPUT	Specify CUSTOMER.INPUT in the field ASSOC.VERSION in the version CUSTOMER.AUDIT	This cannot be achieved if Browser is the front end
39	With respect to NEXT and ASSOC versions, pick out the one TRUE statement	ASSOC Versions are versions of the parent application (version) they are attached to. NEXT Versions are versions of other applications	ASSOC and NEXT versions are always versions of the applications other than the parents version's application	ASSOC and NEXT versions are always versions of the same application	NEXT Versions are versions of the parent application (version) they are attached to. ASSOC Versions are versions of other applications
40	How will you display the current T24 date in an enquiry?	Specify TODAY in the field OPERATION	Specify DATE in the field OPERATION	Specify ITODAY in the CONVERSION field	Specify ITODAY in the field OPERATION
41	How to display the empty fields in the browser?	This can't be achived, System will display only the non empty fields.	Using version ATTRIBUTES, this can be achived	Using enquiry ATTRIBUTES ,this can be achived	Both B AND C
42	What are Composite Screens primarily used for? Please choose the most appropriate answer.	Grouping together related enquiries allowing drilldowns to be displayed in other HTML frames and Composite Screens.	Grouping together related functionality to provide a rich user experience based on roles within a bank.	Displaying a menu that allows a user to run enquiries and transactions in separate HTML frames.	Providing a set of related tabs that allows a user to navigate between enquiries and versions passing data arguments to provide a rich user interface.
43	Assume AUTO.COMP.CHANGE field is not set up in VERSION. A Forex contract (FT.....1) is inputted in BR1 ranch company. How can this contract be viewed from aanother CO3 lead company	By inputting FT....1	Sorry, other company records cannot be viewed	By inputting FT....1 BR1	By inputting FT....1 CO3
44	In what 3 formats can the output of the enquiry be exported	CSV, OFS, BROWSERXML	OFS, XML, XLS	CSV, HTML, XML	OFS, XML, TEXT
45	When creating a version for an application in T24, the value 'OWN' is input in the field COMPANY.ACCESS & the record is committed. How does this affect the way the version functions	Only users belonging to the login company of the person who created the version can use it. Other company users will not be able to use the version itself	Only the user creating the version can use it	A user can open & edit the records created only using this version	Depending on which company user belongs to, he can access records only from his OWN company using this field
46	A user wishes to group all accounts that belong to the same category. The related records need to be grouped & a + symbol when clicked should expand the group to display all the records within a group. Which is the best & the easiest way this can be achieved using T24 Enquiry application	Use the SORT filed to sort data according to the category & then display it	Set the field FIELD.DISP. TYPE to GRAPHX	Use the values STARTTREE/ENDTREE available in the FIELD.DISTYPE field	Create an enquiry with a page break on category
47	As soon as a user logs on to Browser, he would see a screen with the menu, a command line & a tool bar with various Browser tools. Which component of T24 is used to define such a screen	EB.COMPOSITE.SCREEN	HELPTXT.MENU	EB.TABBED.SCREEN	HELPTXT.MAINMENU
48	A HELPTXT.MAINMENU record is created with ID as 99. An ABBREVIATION record is created with ORIGINAL.TEXT set as ?99. What happens when the abbreviation is launched by the user?	You can launch a sub menu but not a Main menu in our case (menu number 99) using ABBREVIATION application	"?"(question mark) cannot be used while inputting an ABBREVIATION	The main menu 99 is launched successfully	You will get an error "Application missing"
49	If a Local reference field must have a set of predefined values like Yes/No/Maybe what must we do when creating the field?	Local reference fields can only be Text Boxes like any ordinary field in T24	Use the VETTING.TABLE field in the LOCAL.TABLE application to define the predefined values	Use the APPLICATION.VET field in the LOCAL.TABLE application to define the predefined values	Use the VETTING.TABLE field in the LOCAL.REF. TABLE application to define the predefined values
50	Which of these cannot be achieved using the Enquiry application in T24	Manipulate the fixed selection criteria using BUILD ROUTINE	Authorise records in an application in T24	Create a report from multiple applications in T24	Edit values stored in records in T24
51					

	An abbreviation is created with ID as VPH. The ORIGINAL.TEXT field is given as EB.PHANTOM V BROWSERTC. Assume BROWSERTC is an existing Phantom in T24. What happens when a USER types VPH from the command line in a Character User Interface	Phantom Browser TC has started	Phantom BrowserTC is launched ready to be verified	Phantom ID should be GCS	V function cannot be used in the ORIGINAL.TEXT field in ABBREVIATION application	You cannot have records in ABBREVIATION application with ORIGINAL.TEXT as EB.PHANTOM V BROWSERTC
52	While working in company A of a bank and using a version ACCOUNT.CREATE.NEW user wishes to open an account belonging to company B. How can he perform this action without explicitly signing onto company B? Assume SMS settings are in place	Specify YES in the field ASSOCIATION in the version ACCOUNT.CREATE.NEW	This cannot be achieved with explicit sign on to company B	Specify YES in the field AUTO.COMMCHANGE in the version ACCOUNT.CREATE.NEW	Specify MB(Multi book) in the field COMPANY in the version ACCOUNT.CREATE.NEW	
53	A Local reference field <u>SECURE.ACCESS.NO</u> in the USER profile stores the access card number of USERS of the bank. This number was generated using a core sub-routine and updated into this field when a user profile was created for the 1st time. Since this field was an open field, people started to change the values. How can this be stopped for all the T24 users (super users included)	Make the field <u>SECURE.ACCESS.NO</u> as NOINPUT in VERSION	Make this field NOINPUT in LOCAL.TABLE level itself	Only option available is to write a routine & attach it all VERSIONS being used by users using USER application	The local reference field property NOINPUT was not set initially while creating it for the 1st time, now when this field property is being changed to NOINPUT the system does not allow it to be modified	
54	The common variable that holds the current records that is to be displayed is	O.DATA	COMI	R.RECORD	ENQ.DATA	
55	Which audit field displays one's time, when USER.LOCAL.TIME is set in SPF	DATE.TIME	AUTHORISER	INPUTTER	LOCAL.TIME	
56	What does the display type DROPDOWN.NOINPUT against a field in ENQUIRY do?	User cannot attach a dropdown enquiry to this field	The field will now show any dropdown values	The field will only allow user input & will not allow user to select from the dropdown values	User can select a value from the dropdown values. User cannot input any other value	
57	What is the use of NO.OF.RETRIES field in SPF?	In this case, the system will ask confirmation no. of times specified here whether to commit the record or not	The number of rekey attempts allowed can be set in the field NO.OF.RETRIES field in SPF & it is associated with the version field REKEY FIELD NO	Maximum no. of error messages that can be displayed for any application	None of the above	
58	What does the attribute "Pop up Dropdown" for a field in ENQUIRY do?	The dropdown enquiry defined for that field will open out a separate pop up window	The field will be highlighted by a red star to show that there is a dropdown enquiry	The context enquiry linked to the field will pop up	A context enquiry attached to the field will auto launch	
59	Assume Multi time zone functionality is enabled and UTC date & time is updated in a local reference field. What is the configuration required in ENQUIRY to convert & display that UTC time to its one time?	Should define the field type 'Zone time'	Make use of the Conversion 'Zone TIME'	Make use of the Conversion 'LOCALZONE'	Should define the field type as 'Date'	
60	When creating a version of any application, which one statement is true with regards to the value that defaults into the field 'NO.OF.AUTH'	If the NO.OF.AUTH field in any version is left blank, then the value is defaulted to 1 always	If the NO.OF.AUTH field in any version is left blank, it remains blank	If the NO.OF.AUTH field in any version is left blank, then the value is defaulted from SPF application	If the NO.OF.AUTH field in any version is left blank, then the value is defaulted from the COMPANY application	
61	If you set Unique ID for REPO Application in T24 using the <u>AUTO.ID.START</u> and then authorize the record what happens?	LOCKING record is not created as it becomes irrelevant if the sequence is randomly generated.	Locking record gets created with ID as FBK.REPO.UNIQUE	A Locking record gets created with ID as REPO.UNIQUE	Locking record gets created with ID as UNIQUE.REPO	A Locking record gets created with ID as UNIQUE with a field inside specifying the Application name
62	What are the possible values that can be specified to the field APPL (Field Name displayed as 'Application' in Browser) in the HELPTEXT.MENU application? Choose the most appropriate answer	An existing HELPTEXT.MENU id	A valid Enquiry or a Version or an application name	An existing HELPTEXT.MAINMENU record ID	B and C only	A and B only
63	A bank wishes to customise their Pie Chart enquiries so that the pie chart segments are shown in the bank's corporate colours. How is this done?	The colours can be changed by changing the EB.ENQUIRY.GRAPH definition	The colours cannot be customised.	The colours can be changed by changing the ENQUIRY definition	The colours can be customised by changing a Cascading Style Sheet (CSS file) on the web server.	
64	When printing out enquiries via the deal slip trigger mechanism, what additional application must be set up in order to print the output apart from <u>PRINTER.ID</u> , DE.FORM.TYPE and REPORT.CONTROL?	REPORT.ENQUIRY	PRINT.ENQUIRY	ENQUIRY.PRINT	ENQUIRY.REPORT	
65	Bank ABC is planning on upgrading from T24 Desktop to Browser. What tasks do they need to do in order to be able to run Browser?	1. Review all local code to ensure applications are stateless. 2. Design HTML pages for locally developed applications. 3. Install the Browser on a web server.	1. Review all local enquiries and versions to ensure they display correctly. 2. Review all local code to ensure applications are stateless. 3. Design HTML pages for locally developed applications. 4. Install the Browser on a web server	1. Review all local enquiries and versions to ensure they display correctly. 2. Review all local code to ensure applications are stateless and do not use INPUT, PRINT & CRT commands. 3. Design Composite and Tabbed screens based on roles. 4. Install the B	1. Review all local code to ensure application are stateless. 2. Design HTML pages for locally developed applications. 3. Install the Browser on a web server	
66	On entering CU or CUS or CUST from the Command line you are taken to the CUSTOMER application in T24. Why do you think this happens?	Since CUSTOMER is a core application the first two characters is enough to launch a T24 application. E.g. CU for CUSTOMER, AC for ACCOUNT, MM for MM.MONEYMARKET, DE for Delivery etc)	Abbreviations CU, CUS and CUST is available in the T24 environment that refer to the CUSTOMER application in T24.	Typing the product code CU is enough to launch the CUSTOMER application	All these are keywords to the CUSTOMER application in T24	
67	What is the purpose of CONTENT field on EB.COMPOSITE.SCREEN?	Defines what the current frame can contain.	Defines what the current frame cannot contain.	Defines what the current frame initially contains.	Defines what the current frame always contains.	
68	Is it possible to generate multiple reports in &HOLD& for a single run of ENQUIRY.REPORT?	YES. You can give ATTRIBUTE as ALLDATA in the enquiry so that system generates multiple pages.	There is no special setup required, system will generate different reports if it reaches 200 pages.	NO. System will generate one &HOLD& report per run	Yes. Using the SPOOL.BRK.FLD field, we can achieve this.	
69	What is the use of NODISPLAY option in the SECTION field of the ENQUIRY application?	To hide the display of the FIELD.NAME as a heading for the column in the enquiry output	To hide the column once a drill down on it is performed in the enquiry output	To not display an extracted row of data if the size of the record is bigger than 1K	To hide the display of data for a particular column in the enquiry output	
70	There is an enquiry on a file which has a large volume of data and when the enquiry is run, the result runs more than 200 pages. The client wants all the pages to be displayed. What is the solution to display enquiry output more than 200 pages?	The field PAGE.SIZE can be changed to 4,999 in the corresponding enquiry record, so that all the records will be displayed.	This is not possible in T24. Only 200 pages could be viewed.	For Enquiries more than 200 pages, ENQUIRY.REPORT should be created and verified to display all the pages	The field ENQ.PAGE.LIMIT in the SPF record determines this factor. This can be increased as per the client requirement so that all the pages are displayed.	
71	Client wants to use VB Scripts used in T24 Desktop from Browser as part of upgrade. Which application should he use from Browser to achieve this?	Use SCRIPT.DESIGNER from Browser	Use VERSION.DESIGNER from Browser	VB scripts created via Desktop is not supported in Browser	User TEC monitor from Browser	
72	Without using multiple frames in a window, can a technical consultant design a single screen to perform the following tasks in T24? 1. Open a customer record 2. Create a new account 3. Perform a funds transfer	He can design the screen using the ASSOCIATED.VERSIONS field in the VERSION application. (Assuming the parent version is based on the CUSTOMER application)	He can use a composite screen and display each application in a frame using the EB.COMPOSITE.SCREEN application	He must create a new application that takes in the required input from the user for all the 3 tasks and then internally processes the request using OFS to update CUSTOMER, ACCOUNT and FUNDS.TRANSFER	He can design a screen containing CUSTOMER, ACCOUNT and FUNDS.TRANSFER versions as a tab using the EB.TABBED.SCREEN application.	
73	The routine attached in DECRYPT.RTN in <u>EB.ENC</u> .PARAMETER will accept	3 parameters	2 parameters	4 parameters	no parameters	Though it can be done it will be shown only after the system message is displayed.
74						
75
